

While the 777 is one of the most technologically advanced commercial aircraft in the world, pilots should always remember that the 777 is still a very large aircraft. Therefore, large aircraft rules apply to the 777. For instance, pilots should not try a very short approach with very tight turns as if they were flying a 737 or other smaller aircraft. The 777's power can offset some pilot errors, but the power can also cause problems during tight maneuvers. It is very cool. It it it it it it it it.
